

Lab Exercise: - FCFS and SJF Scheduling

1. First Come First Serve (FCFS) Scheduling:

Algorithm: -

```
#!/usr/bin/python3
processes = ["P1","P2","P3"]
burst = [5,3,8]
time = 0
print("Process CT TAT WT")
for i in range(len(processes)):
    time+= burst[i]
    ct = time
    wt = ct - burst[i]
    print(processes[i], " ",ct," ",ct," ",wt)
```

Output: -

```
root@kali:~# nano ffss.py
root@kali:~# ./ffss.py
Process CT TAT WT
P1 5 5 0
P2 8 8 5
P3 16 16 8
```

2. Shortest Job First (SJF) Scheduling:

Algorithm: -

```
GNU nano 2.9.6 ffss.py
#!/usr/bin/python3
processes=["P1","P2","P3"]
burst=[6,2,4]
def get_order(burst):
    return sorted(range(len(burst)),key=lambda i:burst[i])
order=get_order(burst)
time=0
print("Process  CT  TAT  WT")
for i in order:
    time+=burst[i]
    ct=time
    wt=ct-burst[i]
    tat=ct
    print(processes[i],"  ",ct,"  ",tat,"  ",wt)
```

Output: -

```
./ffss.py: 2: burst: not found
./ffss.py: 3: time: not found
./ffss.py: 4: Syntax error: word unexpected (expecting ")")

root@kali:~# ./ffss.py
-rwxrwxrwx 1 root root 219 Sep 17 03:14 ffss.py

root@kali:~# nano ffss.py

root@kali:~# ./ffss.py
Process CT TAT WT
P1 5 5 0
P2 8 8 5
P3 16 16 8

root@kali:~# nano ffss.py

root@kali:~# ./ffss.py
Process CT TAT WT
P2 2 2 0
P3 6 6 2
P1 12 12 6

root@kali:~#
```
